

Scenario: You are an athlete/student at the University of South Carolina who struggles to maintain a balance of academics and sports. You are constantly walking around campus and often find yourself dehydrated. You would like to use the hydration app to keep track of how much water you drink and be reminded of how much you should be drinking.

Task 1: Assume that you have drank 3 cups since you last updated your hydration level. Add 3 cups to your tracker.

Task 2: Change your reminder notifications to send you reminders every day at 4 PM.

Task 3: Add 2 more cups to your daily goal. Then add 3 more pounds to your current weight.

2 Things that should be fixed:

- Within reminder settings, adjust so that users are able to adjust reminders based on a certain time rather than just hours.
- Add option to add weight to current weight

2 Things that shouldn't be fixed:

- Keep tracker the same
- Add cups feature the same
